

[photography workshop]

How to take better photos of your kids

Overview:

How does the camera work? A basic introduction

Light – your natural resource

Locations to look for – home, garden and beyond

Interacting with kids – it's not about the camera

Sound and simple photography techniques

Introduction to photoshop

Image storage and display

Detail:

You have a child (or children) and a nice new digital SLR. The only snag is that you don't understand how the kids work let alone how the camera works!

In this workshop I will give you a good working knowledge of how the camera works. I will also look at a variety of camera accessories that may help you take better photographs.

I will then go on to look at different types of light, how these differences affect your photographs and where to find the right light around your home, garden and beyond.

Now it's time to look at how to get the best out of your kids whilst photographing them. No faking! No stiff poses! Just kids being kids.

I will then take a look at image storage and ways of displaying your images. What's the point of taking the photographs if you a) don't know where they are on your computer or b) if you don't display your favourites?

This workshop will help you improve your knowledge of your camera, provide you with simple guidelines and technique for photographing your kids and ensure that photos of the backs of their heads are a thing of the past!

You will need a digital SLR camera to benefit from this workshop. If you have a laptop and a copy of Adobe Photoshop, so much the better.

Duration: Full Day

Price: £275 + vat

Location: Farnham Castle, Farnham, Surrey

Please get in touch for course availability and to make a booking.
